MECCANO

Meccano, the British-built construction set, is engineering in miniature. It enlarges a child's intellect by encouraging him to use his brain, eyes, and hands.

As he builds, he discovers how things work. He learns about form, scale, perspective. Basic physics principles. He develops manual dexterity. Patience. And he expands his inventive capacities and imagination by building models of his own design.

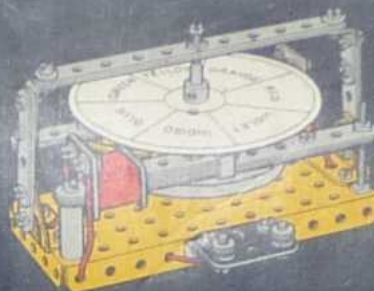

For 70 years Meccano has been making the finest construction sets in the world. Using precision-engineered parts, so tough they can take the most enthusiastic handling.

We believe that constructive play helps build constructive people. Meccano turns a boy's world into a man's world.

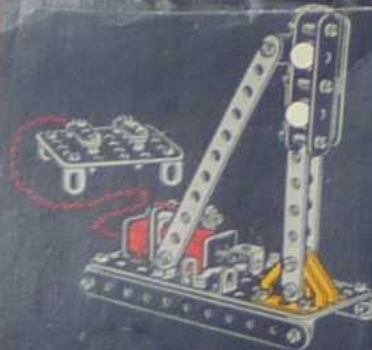

Electrical

Colours of models may differ from illustrations

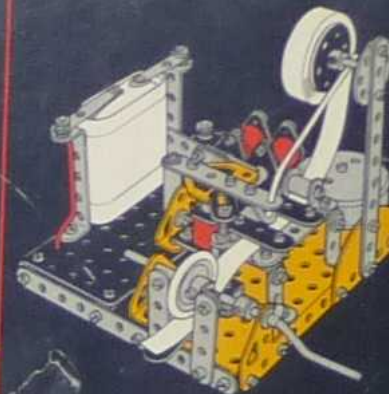

Asynchronous Motor

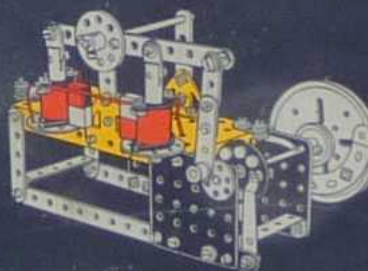

2-Light Signal & Relay Switch

Impulse Counter

Telegraph Receiver with Bell & Morse Key

Beam Engine

MECCANO

A complete No. 4 Meccano Set.
275 parts, plus lots of electrical components
to build exciting electrical models

For expert engineers aged 9 and over.
COLOURED WORKING DRAWINGS AND CIRCUIT DIAGRAMS
